Salvia pratensis (Meadow Clary) at Holly Court Bank Survey on 25 June 2025

Members of Wychwood Flora Group present:

Genny Early, Joe Grainger-Hull, Christine Marsh, Anne Miller, Susan Paice

Holly Court Bank is the site of the largest population of Meadow clary (*Salvia pratensis*) plants in the UK, on a bank that is home to a high diversity of other calcareous meadow specialist plants, see species list below. There are hundreds of long-established *S. pratensis* plants, on a well-drained calcareous bank.

For the last few years, the deer population has had a deleterious effect on the numbers of Meadow clary flowers. Over 90% of flowers have been eaten. In 2020, the last year that flowers set seed in any number, the bank was a cloud of flowers, ranging in tone from dark violet purple, blue, pale blue to white. Since 2020, barely any plants have been able to set seed. The flowering stems are very tasty to deer, the site is remote and deer can graze undisturbed.

Otherwise, the field is grazed with sheep, who are kept to the bottom during the summer with electric fencing. It would be good if electric fencing could be used during the summer to safeguard part of the site for the Meadow clary flowers, while the deer population remains high.

We enjoyed watching a slow worm hunting across the bank, and the large number of plant species to be found, see list below. Thank you to Joe Grainger-Hull for this list.

Table 1. Species list from the whole bank, including areas of longer Arrhenatherum grassland

Species	Common name
Achillea millefolium	Yarrow
Agrimonia eupatoria	Agrimony
Agrostis stolonifera	Creeping bent
Anacamptis pyramidalis	Pyramidal orchid
Anisantha sterilis	Barren brome
Anthoxanthum odoratum	Sweet vernal-grass
Arrhenatherum elatius	False oat-grass
Astragalus glycyphyllos	Wild liquorice
Briza media	Quaking-grass
Bromus erectus	Upright brome
Bromus hordeaceus	Soft brome
